

NOTE: Wire dimming conductors as Class 1

1 SINGLE FIXTURE

Make sure that the power to the fixture is turned off. Slide the slip ring (A) and the canopy (B) onto the stem (C) and leave some space. Screw the junction box crossbar (D) onto the stem (C).

2 FOR EMERGENCY CIRCUIT

In the case where an **emergency circuit** is required, the wires to the emergency circuit will be passed through a second stem.

3 FOR FIXTURE IN GRID CEILING

In the case where the luminaire is installed on a **grid ceiling**, the power cable will pass outside of the stem.

4

Screw the stems (C) on the first fixture (E). Then install it on the second fixture.

5 POWER SIDE

Raise the fixture and tighten the junction box crossbar (D) with screws (by others) to the junction box (G). Make wire connection with electrical marettes (H). Then slide the canopy (B) and tighten the set up with the slip ring (A).

6 NON-POWER SIDE

Raise the fixture and tighten the junction box crossbar (D) with screws (by others) to the junction box (G). Then slide the canopy (B) and tighten the set up with the slip ring (A).

7

CONTINUOUS SYSTEM

For a continuous system, repeat steps 1 to 3 for all mounting hardware.

8

Slowly lift up the cartridge (F) on the female section with the provided lens tool. You should feel the cartridge popping out of the fixture.

9

Unscrew and remove the end plate (I) of the cartridge (F). Keep them in a safe place. Slightly slide the LED boards out of the cartridge. Disconnect LED mox connector (J) by taking a pointed object and pressing on the two tabs. Then remove the cartridge (F) and keep it in a safe place.

10

Screw the stems (C) on the first fixture (E). Then install it on the second fixture.

11

Raise the fixtures and tighten the junction box crossbars (D) with screws (by others) to the junction boxes (G). Make wire connection on the power side with electrical marettes(H). Then slide the canopies (B) and tighten the sets up with the slip rings (A).

12

Remove the screw (L) on the joiner and put it in a safe place. Connect wires between joining fixtures using quick connectors (M). **Number of wires may vary.** Push the wires inside the female fixture.

13

Join fixtures using align pins as guide. Put back in place the provided screw (L) (using 3/16" Ball-End Screwdriver (M) provided). Make sure that no wires are placed in between the extrusions, preventing the fixtures to be joined. Tight the screw (L) to pull the extrusions together. Repeat steps 11 to 13 for all others fixtures in the run.

14

Reconnect the LED molex connectors (J). **NOTE: connect black wire into the negative (-) terminal and the white wire into (+) positive terminal.** Make sure that the wires are not obstructed any LED diode. Screw back the end plate (I) to the cartridge (F). Reinstall the cartridge (F).

15

Insert and push the cartridge (F) back in place. Make sure the cartridge's spring are properly placed onto the bracket (G). Make sure not to pinch the wires when placing the cartridge back.

Put the lens (I) back in place.
