

POP RECESSED SQUARE

DRYWALL MOUNT - INSTRUCTIONS

NOTE: Wire dimming conductors as Class 1

1 FLUSH

Cut hole in the drywall according to the dimension [*] given in the client drawings.

2

Push slowly the diffuser (A) until it unlocked. Lower the diffuser (A) from the housing (B). Disconnect quick connectors (C) between driver and diffuser (A). Remove security cable (D).

3

Rotate fixture and remove power plate (E) from fixture. Install BX connector (F) (by other) and BX cable (G) (by other) through the power plate. Tighten BX connector (F) screw.

4

Connect wires from the BX cable (G) to the fixture driver wires (H) using wire nuts (I). Ensure connections comply with local and national electrical codes.

5

Push connected wires inside the fixture. Reinstall power plate (E) onto fixture by refastening screws to power plate (E) and fixture.

6

Insert fixture's housing (B) into pre-cut hole in drywall, aligning threaded rods (J) with holes in top of the fixture's housing (B). Put washers (K) and tighten nuts (L) to secure the fixture's housing (B).
