PENDANT CABLE - CANOPY DRIVER - INSTALLATION INSTRUCTIONS

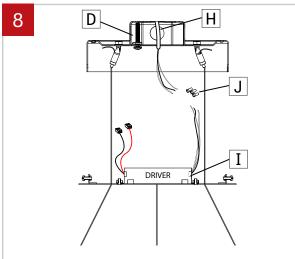

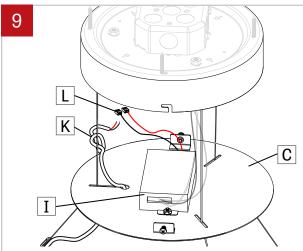

the canopy plate (C). Insert them into the grippers

(F) then adjust the cables (G) by pushing the feeder

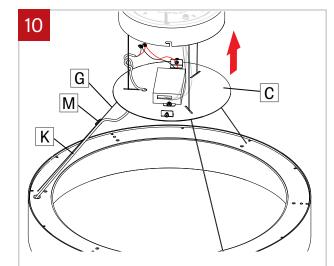

tube (F). Togo 36" and 48" have 4 wires.

Make electrical connections between the driver (I) and the main power (H) with marettes (J). Push the wires inside the junction box (D).

Pass the power cord (K) into the canopy plate (C) and make a knot. Make electrical connections between the power cord (K) and the driver (I) using quick connectors (L).

Secure the power cord (K) to the aircraft cable (G) with a plastic clip (M). Put canopy plate (C) back in place.
