

NOTE: Wire dimming conductors as Class 1

Tamper-resistant pin-in-hex bit, 5/32" is REQUIRED to perform the installation.

1 SINGLE FIXTURE

Make sure the power is turned off. Unscrew and lower the lens frame (A) retained by security cables.

Remove the nuts (B) and the washers (C) (that are steel + rubber bonded together) inside the fixture (D). Put them in a safe place. Finally remove the screws (E) that won't be needed anymore.

3

Locate junction box (F) and mounting points (G) in the ceiling. Refer to dimensions [*] supplied in client drawings.

4

Fasten fixture (D) to threaded stud (H) using washers (C) (that are steel + rubber bonded together) and nuts (B). Make sure the 1/4"-20 nuts are well tightened.

5

Make electrical connections between the main power and the 2FT long white power-cord (I) of the fixture inside wet location junction box (F). Screw back junction box cover.

6

Screw back in place the lens frame (A) making sure not pinching the security cables on the sides. Make sure all the screws are well tightened and the metal frame is slightly regressed inside the aluminum housing.

7

CONTINUOUS SYSTEM

Locate junction box (F) and mounting points (G) in the ceiling. Refer to dimensions [*] supplied in client drawings.

8

Unscrew and lower the lens frame (A) retained by security cables. Repeat for all fixtures in the run.

9

Remove the nuts (B) and the washers (C) (that are steel + rubber bonded together) inside the fixture (D). Put them in a safe place. Finally remove the screws (E) that won't be needed anymore.

10

Unscrew and remove nuts (J) on the outside of the joiner (K). Put the nuts (J) in a safe place.

11

Fasten the first fixture (D) to threaded stud (H) using washers (C) (that are steel + rubber bonded together) and nuts (B). Make sure the 1/4"-20 nuts are well tightened.
